

File support

Most of audio files like:

WAV, FLAC, MP3, OGG, APE

Global Crossover/Fading

This setting will give option in miliseconds how much music will fade on play/stop

Normalize

It will analyze all files and adjust the peak volume of the file to -0.2db. It should create some type of meta file so on next launch of the app does not analyze all files.

Option for Manual analyzing

Option for always analyze on start

Backup/Restore

Save locally or to google drive

Button size

can adjust button size of main screen. It will automatically add more buttons if there is enough space on the screen

Data should be saved in cookie, so on next app launch recovers previous settings
